

Using ninfs on macOS

The standalone Mac application requires macOS 10.12.6 or later.

Macs with Intel and Apple Silicon are both supported.

macFUSE is required. You can download the latest version at <https://osxfuse.github.io>.

ninfs versions 2.0 and later are signed and notarized. If you are having issues starting it, you can bypass Gatekeeper by control-clicking on the app, then click “Open”. This may need to be done more than once until it provides you with the option to open it.
